Wyperfeld National Park, Australia

Wyperfeld National Park, Australia 2000-2003

Native shrubland—the Australian “bush”—appears deep red and distinguishes Wyperfeld National Park in western Victoria, Australia. Fires sweep the park almost yearly. The age of the burn scars can be estimated by their color; old scars are almost as darkly red as the bush, partially regrown areas are lighter red, and the newest scars are bright.

Date	Satellite	Bands	Res	Path	Row
June 13, 2000	Landsat 7 ETM+	4,3,2	30 m	95	85
Apr. 3, 2003	Landsat 7 ETM+	4,3,2	30 m	95	85

Earthshots: Satellite Images of Environmental Change

The U.S. Geological Survey Earth Resources Observation and Science (EROS) Center archives data from the Landsat satellites (1972–present). Earthshots presents environmental changes using Landsat images.
